**Telstar Purple Pinks**  
*Dianthus 'Telstar Purple'*

Plant Height: 6 inches

Flower Height: 8 inches

Spread: 16 inches

Spacing: 12 inches

Sunlight: ○

Hardiness Zone: 2b

Other Names: Border Pinks, Cheddar Pinks

Group/Class: Telstar Series

**Description:**

An exceptional garden performer, this variety blooms early in the season and right up to the first frosts; bright green leaves contrast well with the amazing, frilly purplish-pink blooms; an excellent choice for rock gardens and edging

**Ornamental Features**

Telstar Purple Pinks has masses of beautiful fragrant purple frilly flowers with hot pink overtones at the ends of the stems from late spring to early fall, which are most effective when planted in groupings. The flowers are excellent for cutting. Its attractive narrow leaves remain green in color throughout the year. The fruit is not ornamentally significant.

**Landscape Attributes**

Telstar Purple Pinks is an herbaceous evergreen perennial with a mounded form. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Telstar Purple Pinks is recommended for the following landscape applications;

### Planting & Growing

Telstar Purple Pinks will grow to be only 6 inches tall at maturity extending to 8 inches tall with the flowers, with a spread of 16 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 12 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years.

This plant should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid. It can be propagated by division; however, as a cultivated variety, be aware that it may be subject to certain restrictions or prohibitions on propagation.

Telstar Purple Pinks is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers and foliage against which the thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden. Be aware that in our climate, most plants cannot be expected to survive the winter if left in containers outdoors, and this plant is no exception. Contact our store for more information on how to protect it over the winter months.
